

# PYTHON CONVERSATIONAL LOOP

## 30-Minute Student Task Report

|                 |                                   |
|-----------------|-----------------------------------|
| Student Name    | PALUCHANI BHAVYA                  |
| Register Number | 99230040392                       |
| Department      | CSE                               |
| Task            | Rule-Based Conversational Chatbot |

### 1. Task Overview

The task is to build a simple rule-based conversational chatbot that interacts continuously with the user, recognizes different messages, provides appropriate responses, and allows the user to exit. The target flow is INPUT → PROCESS → RESPOND → REPEAT → EXIT.

### 2. Features Implemented

- Asks the user's name before the main conversation.
- Uses while True to keep the conversation running.
- Uses input() and cleans the message with lower().strip().
- Recognizes greetings including hello, hi, and hey.
- Answers questions about AI, college, and subjects.
- Uses if / elif / else for decision making.
- Uses break when the user types bye or exit.
- Uses the user's name in chatbot responses.
- Handles unknown messages with a useful reply.
- Uses the in operator so greeting variations can be recognized.

### 3. Chatbot Code

```
name = input("Enter your name: ")
print("Hi", name + "!")
print("I am TalkBot. Ask me something or type bye to leave.")

while True:
    message = input("You: ").lower().strip()

    if "hello" in message or "hi" in message or "hey" in message:
        print("TalkBot: Hello", name + "! Nice to meet you.")

    elif "ai" in message:
        print("TalkBot: AI helps computers perform tasks that normally need human intelligence.")

    elif "college" in message:
        print("TalkBot: College is a great place to learn, practice skills, and build new ideas.")

    elif "favorite subject" in message or "subject" in message:
        print("TalkBot: I enjoy programming because it helps turn ideas into working solutions.")

    elif "thank" in message:
        print("TalkBot: You're welcome!")

    elif "bye" in message or "exit" in message:
        print("TalkBot: Goodbye", name + "! Have a great day.")
        break

    else:
        print("TalkBot: I am still learning. Try asking about AI, college, or subjects.")
```

### 4. Sample Execution

```
Enter your name: Bhavya
Hi Bhavya!
I am TalkBot. Ask me something or type bye to leave.

You: hey hello
TalkBot: Hello Bhavya! Nice to meet you.

You: what is ai
TalkBot: AI helps computers perform tasks that normally need human intelligence.

You: tell me about college
TalkBot: College is a great place to learn, practice skills, and build new ideas.

You: what is your favorite subject
TalkBot: I enjoy programming because it helps turn ideas into working solutions.

You: random question
TalkBot: I am still learning. Try asking about AI, college, or subjects.

You: bye
TalkBot: Goodbye Bhavya! Have a great day.
```

### 5. Result

The rule-based chatbot was successfully implemented and tested with greetings, different topics, an unknown message, and an exit command. The chatbot continues the conversation until the user enters bye or exit.
